OBJECTIVE

Motivated MCA fresher with hands-on experience in Python scripting, Linux environments, and application deployment. Seeking a DevOps Engineer role where I can apply my knowledge of CI/CD concepts, containerization, and automation to streamline build and release processes. Passionate about bridging development and operations, eager to contribute to a collaborative team and grow in cloud and infrastructure management.

EDUCATION

Master of Computer Applications (MCA), LEAD College of Management (Autonomous), Palakkad — 2024 – Present
Bachelor of Computer Applications (BCA), Malabar College of Advanced Studies, Vengara, Malappuram — 2021 – 2024

SKILLS

DevOps	CI/CD Pipelines, Build & Release Automation, Deployment Support
Scripting	Python, Bash (basic)
OS & Linux	Linux Command Line, File System Management, Shell Scripting
Containers	Docker, Docker Compose, Basic containerization concepts
CI/CD Tools	Jenkins (familiar), Git & GitHub
Monitoring	Basic application monitoring, log analysis
Other Tools	VS Code, Postman, Google Colab, Jupyter Notebook
Soft Skills	Problem-solving, Team collaboration, Strong communication

PROJECTS

MedLens – Medical Analysis Application
Academic Project | Bluegen Solutions | Jul 2024 – Feb 2025

- Developed and deployed a full-stack medical analysis application using Python, integrating data processing pipelines with a Flutter frontend — demonstrating end-to-end application lifecycle management.
- Automated data ingestion and processing workflows using Python scripts, reducing manual intervention in report analysis.
- Managed application versioning and collaborative development using Git & GitHub throughout the project lifecycle.
- Coordinated between development and testing phases to ensure stable builds and consistent application performance.

Smart E-Commerce Checkout System
Cloud-Based Microservices Project | Docker · RabbitMQ · MySQL · Node.js · Python · Spring Boot

- Designed and deployed a cloud-based microservices architecture with 5 containerized services (Cart, Payment, Inventory, Discount, RabbitMQ) using Docker Compose — demonstrating real-world DevOps deployment practices.
- Built and connected REST APIs across Node.js (Cart Service), Python Flask (Payment Service), and Spring Boot (Inventory Service), managing inter-service communication and data flow.
- Implemented asynchronous event messaging using RabbitMQ to decouple services and handle checkout pipeline events reliably.
- Integrated MySQL for persistent inventory management with JPA, and validated the full checkout pipeline end-to-end using Postman.
